Colorado... from Prairies to Peaktops

Golden Eagle

Alpine Tundra

Timberline

Sub-Alpine

Montane

Foothills

Prairie

Curriculum Enrichment Based on Colorado's State Science Content Standard #3

From 4,000 feet to over 14,000 feet, Colorado's amazing ascent from its eastern prairie grasslands to Alpine glaciers is unique within North America.

The dramatic change in elevation generates an amazing diversity of wildlife... prairie dogs to pikas and painted turtles to ptarmigan.

With LIVE ANIMALS and multi-media, this presentation explains the biologic, geologic and climatic diversity and provides a greater appreciation and understanding for what Colorado is all about.

Burrowing Owl

Bugling Elk

Pika

Ptarmigan

Cougar Chasing Mule Deer

Visit Perry's web site, www.perryconway.com, and click on **Multi-Media Wildlife Programs** for additional programs and information. Presentations are adaptable for K-8 and always include LIVE ANIMALS.
